

Midas

Marginal lands, industrial crops and innovative bio-based value chains

Combining bio-based products, climate resilience and biodiversity through innovative agricultural value chains.

MIDAS is a Horizon Europe project, to develop and to demonstrate innovative solutions to grow industrial crops on marginal agricultural land, and to build sustainable value chains for a wide range of bio-based products.

ACTIVITIES

Map and characterize marginal land in Europe for low-ILUC biomass production

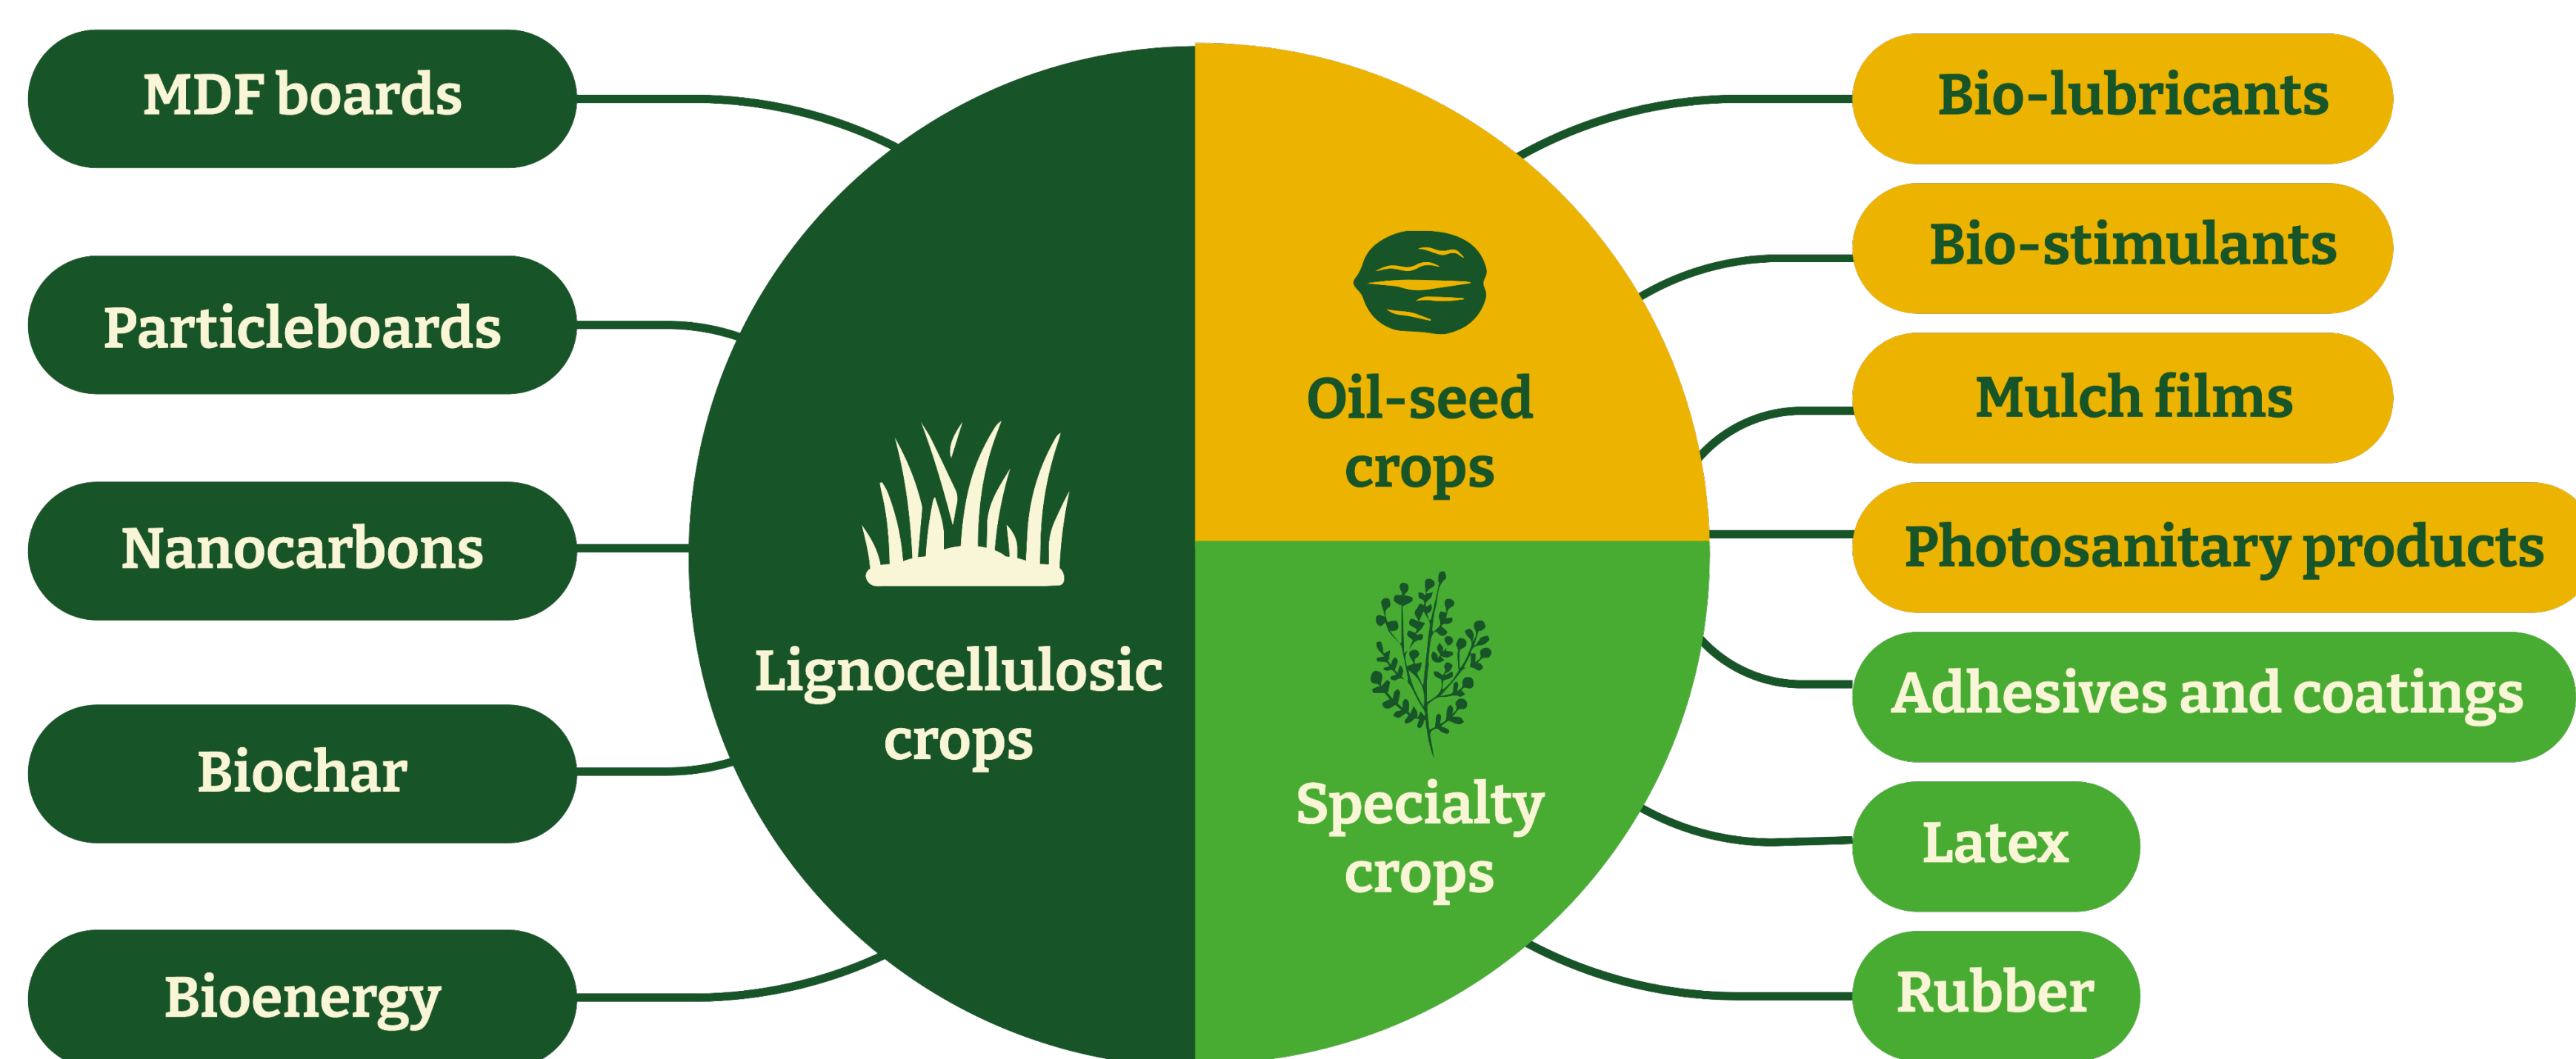

Grow industrial crops on marginal land with climate-resilient and biodiversity-compatible systems

Produce sustainable biomass feedstock additional to food production

Build value chains and develop business for innovative bio-based products

Bio-based value chains

MIDAS adopts a resource-efficient biorefinery concept to develop innovative value chains for a wide range of bio-products.

Contributing to the European Green Deal and to the UN Sustainable Development Goals

MIDAS contributes to the objectives of the European Green Deal and supports the achievement of seven Sustainable Development Goals.
